

## ALL COVERED BASELINE SECURITY ASSESSMENT

### ARE YOUR IT SECURITY TACTICS EFFECTIVE?

**70% of reported breaches are caused by internal vulnerabilities.** All organizations go through assessments of their essential business practices, such as, finances, compliance, and insurance, to determine if the departments are adhering to best practices and benefiting the organization. However, most organizations fail to complete the same due diligence for their information technology (IT) department.

All Covered has developed a Baseline Security Assessment to evaluate an organization for environmental and IT infrastructure security vulnerabilities. The assessment determines the likelihood of the organization to fall victim to cyber crimes.

By developing a specifically tailored testing methodology, All Covered has the ability to test up to 300 assets within a client's internal environment in a matter of a few days. Within this time period, All Covered's ethical hacking team will attempt to access the most sensitive business critical data within the network utilizing the vulnerabilities discovered.

All Covered's testing team provides our clients with an invaluable assessment of their current and potential security vulnerabilities within their IT infrastructure. Additionally, All Covered will recommend strategies for improving the overall security of the organization's information technology assets tailored to their unique network infrastructure and business needs. All Covered provides a final detailed report of findings and attack paths the testing team took to breach the IT infrastructure, allowing you to remediate and realize value immediately.

The Baseline Security Assessment performed by All Covered pinpoints specific areas of business risk in your organization's IT portfolio by targeting the most common point of entry for attackers—end-user systems. Contact us today to take this critical first step in securing your network, data, intellectual property, and future.

### TAKING IT ONE STEP FURTHER...

In addition to the Baseline Security Assessment, All Covered provides enhanced offerings to design an assessment specific to your unique organization. Mitigate risk and exposure by taking advantage of the following supplementary security services:

- Security Monitoring Health Check
- Vulnerability Management Health Check
- Active Defense "Detect and Protect"
- Compliance Assessment
- Security Awareness Training
- Social Engineering
- Vulnerability Management Program Management
- Security Monitoring Program Management
- Security Strategy Assessment
